

## ICT/Computing skills

Everyday usage of digital technology includes when you use a computer, tablet or mobile phone, send email, browse the internet, make a video call - these are all examples of using basic ICT skills and technology to communicate.

In our college we are using smart wall (Smart Class Room) in all the classrooms. This class room setup will enhance the student's skills.

We are conducting more related ICT Computing skills related seminars/workshops/conferences for creating the students skills.
